

Summary of file format discussion:

1. We should have a standard file format.
2. Aziz will contact W3C to find out about directions for RDF and XML Schema.
We will decide on the standard file format for GLIF at a later time and partly based on discussions with W3C.
[Aziz has contact W3C and has not yet gotten a response]
3. A file format can support more than one "main" guideline in a single file. However, a new class will be created that identifies all the main guidelines in a file.
